

**Building a more
sustainable future**

together

Our construction
know-how makes us
different. We use that
expertise to deliver
better designed, better
performing buildings.

We have the knowledge,
skills and data to help you at
every stage of your project.

Design

Design and specification review

We can advise you

if you are looking to use innovative materials, reduce embodied carbon, create a healthy environment, enhance biodiversity or design for re-use.

Planning review

We provide support

especially where construction phase targets are set around areas including local employment and procurement, training and apprenticeships.

Life cycle assessment/ cost analysis

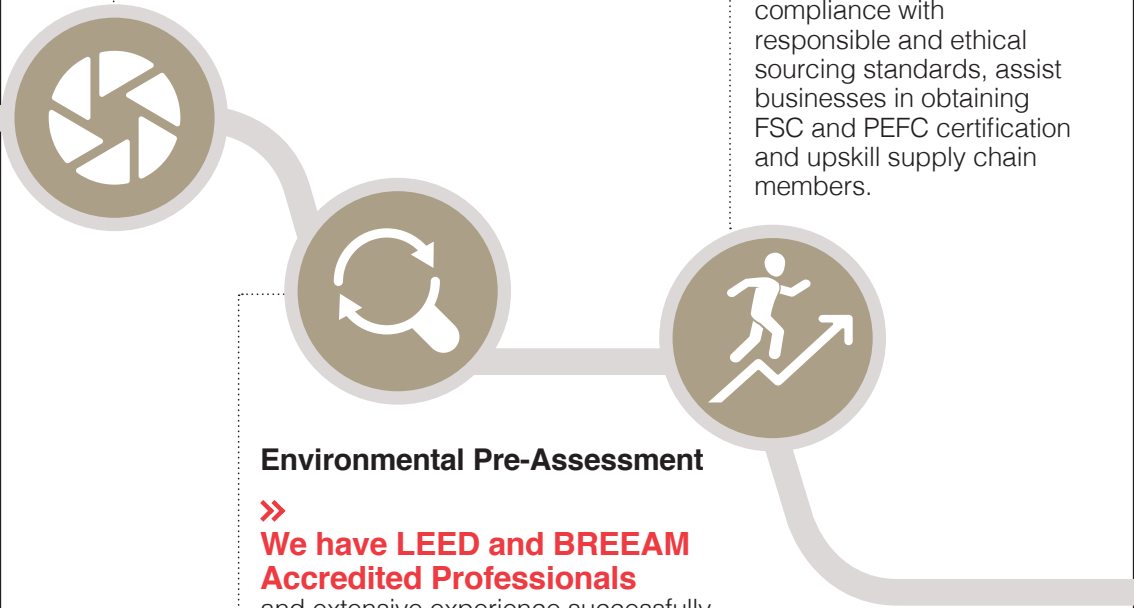

» **Reduce operational expenditure**
with the help of our team of fully-trained in-house assessors and obtain credits to help maximise BREEAM project ratings.

Supply Chain Assessment

» **We can audit supply chain members**
to evaluate their compliance with responsible and ethical sourcing standards, assist businesses in obtaining FSC and PEFC certification and upskill supply chain members.

Environmental Pre-Assessment

» **We have LEED and BREEAM Accredited Professionals**
and extensive experience successfully delivering LEED Platinum and BREEAM Outstanding developments within the UK so we know what can be achieved.

Design+Construction

External standards

Reduce project risk

working with a team with experience of successfully delivering the highest levels in BREEAM, LEED, HQM and WELL.

Embodied carbon assessment

We can help deliver substantial savings

by using real data and providing detailed and accurate assessments of your project and the impact of design, procurement and your supply chain.

Designing out waste

We can identify key areas

to reduce waste. With a wealth of site data collected over many years, we're in a unique position to help your project team become more resource efficient.

Environmental Assessment

Our team of in-house BREEAM and LEED assessors

and Accredited Professionals can be a great asset to your team, providing realistic assessments of what is achievable. Services include both design and post construction stage assessments.

Environmental Noise Assessment

We conduct noise prediction modelling

and mapping during design stage for section 61 requirements for planning submissions, and noise assessments during construction.

Engagement

Strategic advice on KPIs for developers

We can provide expert advice

on your strategic commitments and targets, using our industry knowledge and experience to add value.

Research partnerships

We collaborate

with our key clients, consultants and supply chain to drive progress within the industry.

Knowledge sharing

We believe that breadth of experience

is key to becoming a well-rounded sustainability professional. We partner with other organisations to provide placements and share knowledge and resources across the industry.

Continuous Professional Development

We can provide technical workshops

and give open, honest, reliable advice. A useful contractor's point of view on what can be delivered on site, how to design out waste, the impacts of construction and your supply chain.

Construction

Noise monitoring

Our qualified team

can conduct baseline and continuous noise monitoring to support dialogue with local authorities and communities.

Local labour and apprenticeship review

We can ensure

that local labour and apprenticeship targets are realistic. Using our project experience we can review and challenge specific social value planning requirements.

Bespoke solutions at all stages of the project lifecycle.

- Providing sustainability assessments and analysis
- Conducting embodied carbon assessments
- Helping you develop more sustainable designs
- Supporting project teams
- Assisting with planning submissions
- Helping assess and upskill your supply chain
- Providing strategic advice
- Ensuring compliance with legislation
- Supporting research partnerships
- Conducting BREEAM and LEED Assessments
- Designing out waste

We aim to be your
sustainable
contractor
of choice
